PAZ-2

Model:

PAZ-2/DTA

Power / poles:

0,5 hp (0,37 kW)
1500 rpm (50 Hz)
1800 rpm (60 Hz)

Tension:

110 - 127 v
200 - 240 v

Paddy rice sample capacity (g):

100

Approx. shipping volume (m³):

0,3

Approx. shipping weight (kg):

70

Complementary equipments

- For maximum performance of rice moisture should be within 12 to 13% (B. U.)

Testing Rice Mill PAZ-2/DTA

The testing rice mill is considered the most important equipment in the industrial rice process. Because of it, we obtain the rice yield, generating a parameter for the industrial process.

The rice yield can be different according to the seed variety, planting features, ground type, weather and other factors. Therefore, it is very important to know this index, because it can determine the value of the rice in the market.

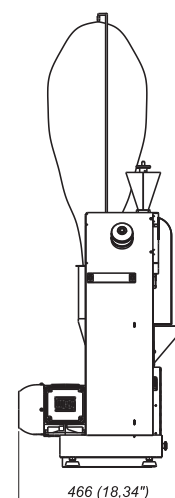

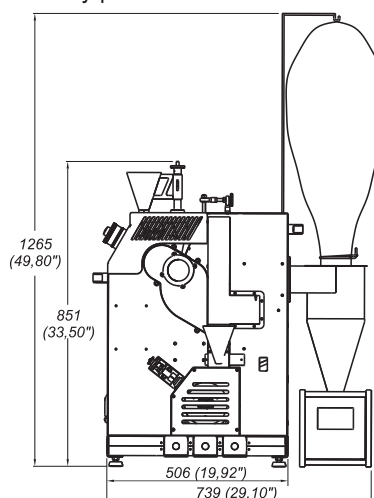

Zaccaria developed the Testing Mill PAZ-2/DTA compact, aiming the most important processes of the rice milling: husking and whitening.

In the grading sector is used the CRZ-2 rice grader, to obtain the percentage of whole and broken grains. It is essential to remember that the yield result is just valid, when this index is referenced with intended whiteness and polishing levels, because these process can change the value of yield directly.

To determine the whiteness and polishing levels with efficiency, we recommend our whiteness meters MBZ-2 and MBZ-P.

PAZ-2/DTA SPECIFICATIONS

- Fully automatic process, not requiring the rice discharging manual operation
- Four possible processes:
 - Unique test
 - Interrupted test
 - Only grains husking
 - Only grains whitening
- Husking System with feeding through vibrating rail and inclined rolls similar to the industrial process that guarantees less breakage and higher husking level
- Fully process control

Measures in mm
